Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a cell surface glycoprotein involved in leukocyte migration; T-

cell adhesion; ganglioside GM1 and

transmembrane protein transport; and T-cell death by a caspase-independent pathway. In addition; the encoded protein may have the

ability to rearrange the actin cytoskeleton and may also act as an oncosuppressor in **Background** 

osteosarcoma. This gene is found in the pseudoautosomal region of chromosomes X and Y

and escapes X-chromosome inactivation. There is a related pseudogene located immediately adjacent to this locus. [provided by RefSeq; Mar
