This gene encodes a member of the C-type lectin/C-type lectin-like domain (CTL/CTLD) superfamily. Members of this family share a common protein fold and have diverse functions,

such as cell adhesion, cell-cell signalling, glycoprotein turnover, and roles in inflammation and immune response. The encoded type 2 transmembrane protein may play a role in dead title cell function. The transmission to the collection of the protein transmission of the cell function. **Background**

dendritic cell function. Two transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeg, Jul 2008]
