

PRODUCT INFORMATION

Clone ID 7F12
Target MICA

Synonyms MIC-A; PERB11.1

Host Species Rabbit

DescriptionBiotinylated Anti-MICA antibody(7F12), IgG1

Chimeric mAb

Delivery 2-3 weeks Uniprot ID Q29983

IgG type Rabbit/Human Fc chimeric IgG1

Clonality Monoclonal Reactivity Human

Applications WB; Flow Cyt

Recommended

Background

Dilutions WB 1:1000; Flow Cyt 1:100

PurificationPurified from cell culture supernatant by affinity

chromatography

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Storage & Shipping intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes the highly polymorphic major histocompatability complex class I chain-related protein A. The protein product is expressed on the cell surface, although unlike canonical class I molecules it does not seem to associate with beta-2-microglobulin. It is a ligand for the NKG2-D type II integral membrane protein receptor. The protein functions as a stress-induced antigen that is broadly recognized by intestinal epithelial gamma delta T cells. Variations in this gene have

is broadly recognized by intestinal epithelial gamma delta T cells. Variations in this gene have been associated with susceptibility to psoriasis 1 and psoriatic arthritis, and the shedding of MICA-related antibodies and ligands is involved in the progression from monoclonal gammopathy of undetermined significance to multiple myeloma. Alternative splicing of this gene results in multiple
