Biotinylated Human CD4 full length protein-synthetic nanodisc

Cat. No. FLP100160B

## **PRODUCT INFORMATION**

| Тад                             | Biotinylated, C-Flag&Avi Tag   |
|---------------------------------|--|
| Target                          | CD4  |
| Synonyms                        | T4; IMD79; Leu-3; OKT4D; CD4mut  |
| Description                     | Biotinylated Human CD4 full length protein-<br>synthetic nanodisc  |
| Delivery                        | In Stock   |
| Uniprot ID                      | P01730   |
| <b>Expression Host</b>          | HEK293   |
| <b>Protein Families</b>         | Transmembrane  |
| Protein Pathways                | Antigen processing and presentation, Cell<br>adhesion molecules (CAMs), Hematopoietic cell<br>lineage, Primary immunodeficiency, T cell<br>receptor signaling pathway<br>The human full length CD4 Protein has a MW of   |
| Molecular Weight                | 55.9 kDa   |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions.   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.   |
| Background                      | This gene encodes the CD4 membrane<br>glycoprotein of T lymphocytes. The CD4 antigen<br>acts as a coreceptor with the T-cell receptor on<br>the T lymphocyte to recognize antigens displayed<br>by an antigen presenting cell in the context of<br>class II MHC molecules. The CD4 antigen is also a<br>primary receptor for entry of the human<br>immunodeficiency virus through interactions with<br>the HIV Env gp120 subunit. This gene is<br>expressed not only in T lymphocytes, but also in B<br>cells, macrophages, granulocytes, as well as in<br>various regions of the brain. The protein functions<br>to initiate or augment the early phase of T-cell<br>activation, and may function as an important<br>mediator of indirect neuronal damage in<br>infectious and immune-mediated diseases of the<br>central nervous system. Multiple alternatively<br>spliced transcript variants encoding different<br>isoforms have been identified in this gene.<br>[provided by RefSeq, May 2020] |
| Usage                           | Research use only  |
| Conjugate                       | Biotinylated   |

## Biotinylated Human CD4 full length protein-synthetic nanodisc ELISA

0.02 µg of Anti-Flag Rabbit mAb per well

## Figure 1. ELISA plate pre-coated by 0.2 $\mu$ g/mL (100 $\mu$ L/well) Anti-Flag monoclonal antibody can bind Biotinylated Human CD4 full length protein-synthetic nanodisc (FLP100160B) in a linear range of 16–2000 ng/mL. In order to specifically detect FLP100160B, HRP Conjugated Streptavidin was used as detection antibody.

Conjugated Streptavidin was used as d kDa M R 250 130 100 70 55 35 25
