

PRODUCT INFORMATION

CA9 **Target**

Monoclonal Cell Line Derived from CHO-S Cells, Description Engineered for Stable Expression of Human CA9

Using Lentiviral Technology

Host Cells CHO-S **Uniprot ID** Q16790 Applications FACS Data

DMEM+10% FBS+1% P.S+Gln+2 ug/mL **Growth media**

Puromycin **Package** 5E6 Cells/mL

Suggested Control SKU: BME100040

> 1. Please inspect cells upon receipt and report any issues promptly. 2. We offer one-time replacements for issues reported within a week of

receipt. 3. User-induced issues are not eligible for free replacements. 4. We do not accept liability for damages resulting from cell use, storage, or loss. 5. Feedback received more than one month

after receipt will not be processed.

Cells are shipped using dry ice and require liquid Storage & Shipping nitrogen storage for long term preservation.

Synonyms CAIX; MN

Warranty and

Disclaimer

Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes; including respiration; calcification; acid-base balance; bone

resorption; and the formation of aqueous humor; cerebrospinal fluid; saliva; and gastric acid. They

show extensive diversity in tissue distribution and in their subcellular localization. CA IX is a **Background** transmembrane protein and is one of only two tumor-associated carbonic anhydrase isoenzymes known. It is expressed in all clear-cell renal cell

carcinoma; but is not detected in normal kidney or most other normal tissues. It may be involved in cell proliferation and transformation. This gene was mapped to 17q21.2 by fluorescence in situ hybridization; however; radiation hybrid mapping
