

PRODUCT INFORMATION

Tag C-Flag Tag

Target AA1R Synonyms RDC7

Protein Families

Background

DescriptionHuman AA1R full length protein-synthetic

nanodisc

Delivery 6~8weeks

Uniprot ID P30542

Expression Host HEK293

Protein Pathways GPCRDB Class A Rhodopsin-like, Nucleotide GPCRs, Apoptosis, Metabolic and Obesity,

Molecular Weight The human full length AA1R protein has a MW of

36.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

GPCR, Transmembrane, Druggable Genome,

Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is an adenosine receptor that belongs to the G-protein coupled receptor 1 family. There are 3 types of adenosine receptors, each with a specific pattern of ligand binding and tissue distribution, and together they regulate a diverse set of physiologic functions. The type A1 receptors inhibit adenylyl cyclase, and play a role in the fertilization process. Animal

studies also suggest a role for A1 receptors in kidney function and ethanol intoxication.

Transcript variants with alternative splicing in the 5' UTR have been found for this gene. [provided
