

PRODUCT INFORMATION

Target AGTR1

AG2S; AGTR1B; AT1; AT1AR; AT1B; AT1BR; AT1R; AT2R1; HAT1R**Synonyms**

Recombinant Human AGTR1 Protein with C-terminal Description

human Fc tag

Delivery In Stock P30556 **Uniprot ID HEK293 Expression Host**

Tag C-Human Fc Tag

Molecular

Background

AGTR1(Met1-Ile27) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of 29.2 kDa after removal of the signal peptide. The apparent molecular mass of AGTR1-hFc is approximately 35-55 kDa **Molecular Weight**

due to glycosylation.

Purity

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. Lyophilized from the protein PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of

Formulation & Reconstitution reconstitution.

Storage & Shipping

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

temperature.

Angiotensin II is a potent vasopressor hormone and a primary regulator of aldosterone secretion. It is an important effector controlling blood pressure and volume in the cardiovascular system. It acts through at least two types of receptors. This gene encodes the type 1 receptor which is thought to mediate the major cardiovascular effects of angiotensin II. This gene may play a role in the generation of reperfusion arrhythmias following restoration of blood flow to ischemic or infarcted myocardium. It was previously thought that a related gene, denoted as AGTR1B, existed; however, it is now believed that there is only one type 1 receptor gene in humans. Alternative

only one type 1 receptor gene in humans. Alternative splicing of this gene results in multiple transcript variants.
