

PRODUCT INFORMATION

ALPL Target

HOPS; HPPA; HPPC; HPPI; HPPO; TNAP; TNALP; **Synonyms**

APTNAP; TNSALP; AP-TNAP; TNS-ALP

Recombinant human ALPL Protein with C-terminal **Description**

10×His tag

Delivery In Stock **Uniprot ID** P05186 **Expression Host HEK293**

C-10×His tag Tag

Molecular

Storage & Shipping

Purity

ALPL(Leu18-Ser501) 10×His tag Characterization

The protein has a predicted molecular mass of

54.7 kDa after removal of the signal peptide. The apparent molecular mass of ALPL-His is **Molecular Weight**

approximately 55-70 kDa due to glycosylation. The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the alkaline phosphatase family of proteins. There are at least four distinct but related alkaline phosphatases:

intestinal, placental, placental-like, and liver/bone/kidney (tissue non-specific). The first three are located together on chromosome 2, while the tissue non-specific form is located on chromosome 1. The product of this gene is a membrane bound glycosylated enzyme that is not

expressed in any particular tissue and is, therefore, referred to as the tissue-nonspecific Background form of the enzyme. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically

processed to generate the mature enzyme. This enzyme may play a role in bone mineralization. Mutations in this gene have been linked to
