

**PRODUCT INFORMATION**

<b>Target</b>	BTK
<b>Synonyms</b>	AGMX1;AT;ATK;BPK;IGHD3;IMD1;PSCTK1;XLA
<b>Description</b>	Recombinant Human BTK Protein with C-terminal 3×Flag tag
<b>Delivery</b>	In Stock
<b>Uniprot ID</b>	Q06187
<b>Expression Host</b>	HEK293
<b>Tag</b>	C-3×Flag Tag
<b>Molecular Characterization</b>	BTK(Met1-Ser659) 3×Flag tag
<b>Molecular Weight</b>	The protein has a predicted molecular mass of 79.2 kDa after removal of the signal peptide.
<b>Purity</b>	The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.
<b>Formulation &amp; Reconstitution</b>	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
<b>Storage &amp; Shipping</b>	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
<b>Background</b>	The protein encoded by this gene plays a crucial role in B-cell development. Mutations in this gene cause X-linked agammaglobulinemia type 1, which is an immunodeficiency characterized by the failure to produce mature B lymphocytes, and associated with a failure of Ig heavy chain rearrangement. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Dec 2013]
<b>Usage</b>	Research use only
