Background

The human full length CAC1F-Strep protein has a MW of 220.7 kDa **Molecular Weight**

Lyophilized from nanodisc solubilization buffer (20) mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% Formulation & 8% trehalose is added as protectants before Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a multipass transmembrane protein that functions as an alpha-1 subunit of the voltage-dependent calcium channel, which mediates the influx of calcium ions into the cell. The encoded protein forms a complex of alpha-1, alpha-2/delta, beta, and gamma subunits in a 1:1:1:1 ratio. Mutations in this gene can cause X-

linked eye disorders, including congenital stationary night blindness type 2A, cone-rod

dystropy, and Aland Island eye disease.

Alternatively spliced transcript variants encoding multiple isoforms have been observed. [provided
