

## **PRODUCT INFORMATION**

C-Flag Tag Tag **Target** CAC1H

**Synonyms** CACNA1HB, Cav3.2, ECA6, EIG6, HALD4 Human CAC1H full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** 095180 **Expression Host HEK293** 

Ion Channels: Calcium **Protein Families** 

**Protein Pathways** N/A

**Background** 

The human full length CAC1H protein has a MW of **Molecular Weight** 

259.2kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a T-type member of the alpha-1 subunit family, a protein in the voltagedependent calcium channel complex. Calcium channels mediate the influx of calcium ions into the cell upon membrane polarization and consist of a complex of alpha-1, alpha-2/delta, beta, and gamma subunits in a 1:1:1:1 ratio. The alpha-1 subunit has 24 transmembrane segments and forms the pore through which ions pass into the cell. There are multiple isoforms of each of the

proteins in the complex, either encoded by different genes or the result of alternative splicing of transcripts. Alternate transcriptional splice variants, encoding different isoforms, have been characterized for the gene described here. Studies suggest certain mutations in this gene lead to childhood absence epilepsy (CAE).
