

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target CACB4

Synonyms CAB4, CACNLB4, EA5, EIG9, EJM, EJM4, EJM6

Human CACB4-Strep full length protein-synthetic **Description**

nanodisc

Delivery 6~8weeks **Uniprot ID** 000305 **Expression Host HEK293**

Ion Channels: Other **Protein Families**

Protein Pathways N/A

Background

The human full length CACB4-Strep protein has a **Molecular Weight**

MW of 58.2 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the beta subunit family of voltage-dependent calcium channel complex proteins. Calcium channels mediate the

influx of calcium ions into the cell upon

membrane polarization and consist of a complex of alpha-1, alpha-2/delta, beta, and gamma subunits in a 1:1:1:1 ratio. Various versions of each of these subunits exist, either expressed from similar genes or the result of alternative splicing. The protein encoded by this locus plays an important role in calcium channel function by

modulating G protein inhibition, increasing peak calcium current, controlling the alpha-1 subunit membrane targeting and shifting the voltage dependence of activation and inactivation. Certain mutations in this gene have been associated with idiopathic generalized epilepsy (IGE), juvenile myoclonic epilepsy (JME), and episodic ataxia, type 5. [provided by RefSeq, Aug
