Cat. No. FLP100219

PRODUCT INFORMATION

Tag C-Flag Tag CCR10 **Target** GPR2 **Synonyms**

Human CCR10 full length protein-synthetic **Description**

nanodisc **Delivery** In Stock **Uniprot ID** P46092 **Expression Host HEK293**

Formulation & Reconstitution

Storage & Shipping

Protein Families Druggable Genome, GPCR, Transmembrane

Chemokine signaling pathway, Cytokine-cytokine **Protein Pathways**

receptor interaction

The human full length CCR10 protein has a MW of **Molecular Weight**

38.4 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Chemokines are a group of small (approximately 8 to 14 kD), mostly basic, structurally related molecules that regulate cell trafficking of various types of leukocytes through interactions with a subset of 7-transmembrane, G protein-coupled receptors. Chemokines also play fundamental roles in the development, homeostasis, and function of the immune system, and they have effects on cells of the central nervous system as

Background well as on endothelial cells involved in

angiogenesis or angiostasis. Chemokines are divided into 2 major subfamilies, CXC and CC, based on the arrangement of the first 2 of the 4

conserved cysteine residues; the 2 cysteines are separated by a single amino acid in CXC chemokines and are adjacent in CC chemokines. CCR10 is the receptor for CCL27 (SCYA27; MIM 604833); CCR10-CCL27 interactions are involved in Table 2011 and the delia inflammatics.

in T cell-mediated skin inflammation.

Usage Research use only Conjugate Unconjugated

ELISA assay to evaluate CCR10-Nanodisc 0.2µg Human CCR10-Nanodisc per well

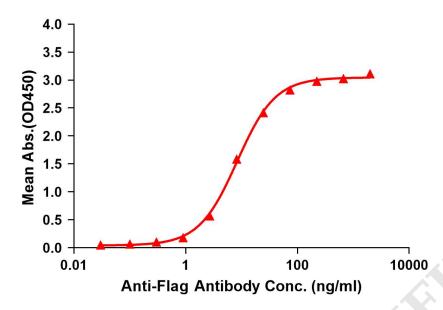

Figure 1. Elisa plates were pre-coated with Flag Tag CCR10-Nanodisc ($0.2\mu g/per$ well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with CCR10-Nanodisc is 8.343 ng/ml.

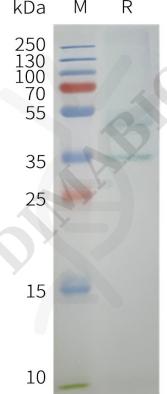

Figure 2. Human CCR10-Nanodisc, Flag Tag on SDS-PAGE
