

PRODUCT INFORMATION

Target	DKK1
Synonyms	DKK-1;SK
Description	Recombinant Human DKK1 Protein with C-terminal mouse Fc tag
Delivery	In Stock
Uniprot ID	O94907
Expression Host	HEK293
Tag	C-mouse Fc Tag
Molecular Characterization	DKK1(Thr32-His266) mFc(Pro99-Lys330)
Molecular Weight	The protein has a predicted molecular mass of 52.0 kDa after removal of the signal peptide. The apparent molecular mass of DKK1-mFc is approximately 55-70 kDa due to glycosylation.
Purity	The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.
Formulation & Reconstitution	Lyophilized from sterile PBS, pH 7.4. Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.
Storage & Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Background	This gene encodes a member of the dickkopf family of proteins. Members of this family are secreted proteins characterized by two cysteine-rich domains that mediate protein-protein interactions. The encoded protein binds to the LRP6 co-receptor and inhibits beta-catenin-dependent Wnt signaling. This gene plays a role in embryonic development and may be important in bone formation in adults. Elevated expression of this gene has been observed in numerous human cancers and this protein may promote proliferation, invasion and growth in cancer cell lines. [provided by RefSeq, Sep 2017]
Usage	Research use only
