

## **PRODUCT INFORMATION**

EPHA5 **Target** 

**Synonyms** CEK7;EHK-1;EHK1;EK7;HEK7;TYRO4

Recombinant human EPHA5 protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock **Uniprot ID** P54756 **Expression Host HEK293** 

Tag C-6×His Tag

Molecular Characterization

Storage & Shipping

**Background** 

EPHA5(Pro25-Pro573) 6×His tag

The protein has a predicted molecular mass of

61.6 kDa after removal of the signal peptide. The apparent molecular mass of EPHA5-His is **Molecular Weight** 

approximately 70-100 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats.

The ephrin receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by

RefSeq, Aug 2013]
