

## **PRODUCT INFORMATION**

**Target FSHB Synonyms HH24** 

Recombinant human FSHB Protein with C-terminal **Description** 

human Fc tag

**Delivery** In Stock **Uniprot ID** P01225 **Expression Host HEK293** 

Tag C-Human Fc tag

Molecular

FSHB(Asn19-Glu129) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of 38.6 kDa after removal of the signal peptide. The **Molecular Weight** 

apparent molecular mass of FSHB-hFc is

approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The pituitary glycoprotein hormone family includes follicle-stimulating hormone, luteinizing hormone, chorionic gonadotropin, and thyroidstimulating hormone. All of these glycoproteins consist of an identical alpha subunit and a

hormone-specific beta subunit. This gene encodes the beta subunit of follicle-stimulating hormone. **Background** In conjunction with luteinizing hormone, follicle-

stimulating hormone induces egg and sperm production. Alternative splicing results in two transcript variants encoding the same protein. [provided by RefSeq, Jul 2008]
