

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target FZD2

Synonyms Fz2, OMOD2, fz-2, fzE2, hFz2

Human FZD2-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q14332

Expression Host HEK293

Formulation & Reconstitution

Background

Protein Families GPCR, Transmembrane, Druggable Genome,

Wnt NetPath 8,Wnt signaling,Wnt signaling and pluripotency,Cancer,Notch,Wnt Pathway,Stem **Protein Pathways**

Cell

The human full length FZD2-Strep protein has a **Molecular Weight**

MW of 63.6 kDa

Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This intronless gene is a member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the wingless type MMTV integration

site family of signaling proteins. This gene encodes a protein that is coupled to the betacatenin canonical signaling pathway. Competition between the wingless-type MMTV integration site family, member 3A and wingless-type MMTV

integration site family, member 5A gene products for binding of this protein is thought to regulate the beta-catenin-dependent and -independent pathways. [provided by RefSeq, Dec 2010]
