<b>Background</b>	A member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the Wingless type MMTV integration site family of signaling proteins. Most frizzled receptors are coupled to the beta-catenin canonical signaling pathway. This protein may play a role as a positive regulator of the Wingless type MMTV integration site signaling pathway. A transcript variant retaining intronic sequence and encoding a shorter isoform has been described, however, its expression is not supported by other experimental evidence.
<b>Usage</b>	Research use only
<b>Conjugate</b>	Unconjugated

### ELISA assay to evaluate FZD4-MNP 0.5 $\mu$ g Human FZD4-MNP per well

Figure1. Elisa plates were pre-coated with 0.5 $\mu$ g/per well purified human FZD4 full length membrane nanoparticles. Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with FZD4 full length membrane nanoparticles is 13.75ng/ml.
