

## **PRODUCT INFORMATION**

C-Flag Tag Tag **Target** GALR2

**Synonyms** GAL2-R, GALNR2, GALR-2

Human GALR2 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** 043603 **Expression Host HEK293** 

Storage & Shipping

**Background** 

Transmembrane, Druggable Genome, **Protein Families** 

GPCRDB Class A Rhodopsin-like, Peptide **Protein Pathways** 

GPCRs, Apoptosis,

The human full length GALR2 protein has a MW of **Molecular Weight** 

41.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Galanin is an important neuromodulator present in the brain, gastrointestinal system, and hypothalamopituitary axis. It is a 30-amino acid non-C-terminally amidated peptide that potently stimulates growth hormone secretion, inhibits cardiac vagal slowing of heart rate, abolishes sinus arrhythmia, and inhibits postprandial gastrointestinal motility. The actions of galanin are mediated through interaction with specific membrane receptors that are members of the 7transmembrane family of G protein-coupled receptors. GALR2 interacts with the N-terminal

residues of the galanin peptide. The primary signaling mechanism for GALR2 is through the phospholipase C/protein kinase C pathway (via Gg), in contrast to GALR1, which communicates its intracellular signal by inhibition of adenylyl cyclase through Ği. However, it has been demonstrated that GALR2 couples efficiently to both the Gq and Gi proteins to simultaneously activate 2 independent signal transduction pathways. [provided by RefSeq, Jul 2008]
