

## **PRODUCT INFORMATION**

| Тад                             | C-Flag&Strep Tag  |
|---------------------------------|---|
| Target                          | GBRA5   |
| Synonyms                        | DEE79, EIEE79   |
| Description                     | Human GBRA5-Strep full length protein-synthetic<br>nanodisc   |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | P31644  |
| <b>Expression Host</b>          | HEK293  |
| <b>Protein Families</b>         | Ion Channels: Cys-loop Receptors  |
| Protein Pathways                | N/A   |
| Molecular Weight                | The human full length GBRA5-Strep protein has a Market M |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | GABA is the major inhibitory neurotransmitter in<br>the mammalian brain where it acts at GABA-A<br>receptors, which are ligand-gated chloride<br>channels. Chloride conductance of these channels<br>can be modulated by agents such as<br>benzodiazepines that bind to the GABA-A<br>receptor. At least 16 distinct subunits of GABA-A<br>receptors have been identified. Transcript<br>variants utilizing three different alternative non-<br>coding first exons have been described. [provided<br>by RefSeq, Jul 2008]   |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
