Formulation & Reconstitution

Storage & Shipping

**Background** 

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

**Target GNRHR** 

**Synonyms** GNRHR1; GRHR; HH7; LHRHR; LRHR

Human GNRHR-Strep full length protein-synthetic **Description** 

nanodisc 6~8weeks

**Uniprot ID** P30968 **Expression Host HEK293** 

**Protein Families** Druggable Genome, GPCR, Transmembrane

GnRH signaling pathway, Neuroactive ligand-receptor interaction **Protein Pathways** 

The human full length GNRHR-Strep protein has a **Molecular Weight** 

MW of 37.7 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The receptor for type 1 gonadotropin-releasing hormone. This receptor is a member of the seventransmembrane, G-protein coupled receptor (GPCR) family. It is expressed on the surface of

pituitary gonadotrope cells as well as lymphocytes, breast, ovary, and prostate. Following binding of gonadotropin-releasing hormone, the receptor associates with G-proteins that activate a phosphatidylinositol-calcium

second messenger system. Activation of the receptor ultimately causes the release of gonadotropic luteinizing hormone (LH) and follicle stimulating hormone (FSH). Defects in this gene are a cause of hypogonadotropic hypogonadism (HH). Alternative splicing results in multiple transcript variants encoding different isoforms.
