Cat. No. FLP100326

PRODUCT INFORMATION

C-Flag Tag Tag **Target** GRM6

Synonyms CSNB1B, GPRC1F, MGLUR6, mGlu6

Human GRM6 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** 015303 **Expression Host HEK293**

Protein Families Transmembrane, Druggable Genome,

GPCRDB Class C Metabotropic glutamate **Protein Pathways**

pheromone,

The human full length GRM6 protein has a MW of **Molecular Weight**

95.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

L-glutamate is the major excitatory

neurotransmitter in the central nervous system and activates both ionotropic and metabotropic

glutamate receptors. Glutamatergic neurotransmission is involved in most aspects of normal brain function and can be perturbed in

many neuropathologic conditions. The metabotropic glutamate receptors are a family of G protein-coupled receptors, that have been divided into 3 groups on the basis of sequence

homology, putative signal transduction **Background** mechanisms, and pharmacologic properties. Group I includes GRM1 and GRM5 and these

receptors have been shown to activate phospholipase C. Group II includes GRM2 and GRM3 while Group III includes GRM4, GRM6, GRM7 and GRM8. Group II and III receptors are linked to the inhibition of the cyclic AMP cascade but differ in their agonist selectivities. Mutations in this gene result in congenital stationary night blindness type 1B. [provided by RefSeq, May
