

## **PRODUCT INFORMATION**

| Tag                             | C-Flag&Strep Tag  |
|---------------------------------|---|
| Target                          | GRM7  |
| Synonyms                        | GLUR7; GPRC1G; MGLU7; MGLUR7; NEDSHBA;<br>PPP1R87   |
| Description                     | Human GRM7-Strep full length protein-synthetic nanodisc   |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | Q14831  |
| <b>Expression Host</b>          | HEK293  |
| <b>Protein Families</b>         | Druggable Genome, GPCR, Transmembrane   |
| Protein Pathways                | Neuroactive ligand-receptor interaction   |
| Molecular Weight                | The human full length GRM7-Strep protein has a MW of 102.3 kDa  |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | L-glutamate is the major excitatory<br>neurotransmitter in the central nervous system,<br>and it activates both ionotropic and metabotropic<br>glutamate receptors. Glutamatergic<br>neurotransmission is involved in most aspects of<br>normal brain function and can be perturbed in<br>many neuropathologic conditions. The<br>metabotropic glutamate receptors are a family of<br>G protein-coupled receptors that have been<br>divided into three groups on the basis of<br>sequence homology, putative signal transduction<br>mechanisms, and pharmacologic properties.<br>Group I includes GRM1 and GRM5, and these<br>receptors have been shown to activate<br>phospholipase C. Group II includes GRM2 and<br>GRM3, while Group III includes GRM4, GRM6,<br>GRM7 and GRM8. Group II and III receptors are<br>linked to the inhibition of the cyclic AMP cascade<br>but differ in their agonist selectivities. |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
