

PRODUCT INFORMATION

HAMP Target

Synonyms HEPC;HFE2B;LEAP1;PLTR

Recombinant Human HAMP(60-84) Protein with C-Description

terminal human Fc tag

Delivery In Stock **Uniprot ID** P81172 **Expression Host HEK293**

Tag C-Human Fc Tag

Molecular

Storage & Shipping

Background

HAMP(Asp60-Thr84) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight**

28.9 kDa after removal of the signal peptide. The apparent molecular mass of HAMP(60-84)-hFc is approximately 25-35 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The product encoded by this gene is involved in the maintenance of iron homeostasis, and it is necessary for the regulation of iron storage in macrophages, and for intestinal iron absorption. The preproprotein is post-translationally cleaved into mature peptides of 20, 22 and 25 amino acids, and these active peptides are rich in cysteines, which form intramolecular bonds that

stabilize their beta-sheet structures. These peptides exhibit antimicrobial activity against bacteria and fungi. Mutations in this gene cause hemochromatosis type 2B, also known as juvenile hemochromatosis, a disease caused by severe iron overload that results in cardiomyopathy,
