

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target KCAB1

AKR6A3, KCNA1B, KV-BETA-1, Kvb1.3, hKvBeta3, **Synonyms**

hKvb3

Human KCAB1-Strep full length protein-synthetic **Description**

nanodisc 6~8weeks

Delivery Uniprot ID Q14722 **HEK293 Expression Host**

Protein Families Ion Channels: Other

Protein Pathways

Background

The human full length KCAB1-Strep protein has a **Molecular Weight**

MW of 46.6 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Potassium channels represent the most complex class of voltage-gated ion channels from both functional and structural standpoints. Their

diverse functions include regulating neurotransmitter release, heart rate, insulin

secretion, neuronal excitability, epithelial

electrolyte transport, smooth muscle contraction, and cell volume. Four sequence-related potassium channel genes – shaker, shaw, shab, and shal – have been identified in Drosophila, and

each has been shown to have human homolog(s). This gene encodes a member of the potassium channel, voltage-gated, shaker-related subfamily. This member includes distinct isoforms which are encoded by alternatively spliced transcript variants of this gene. Some of these isoforms are beta subunits, which form heteromultimeric complexes with alpha subunits and modulate the

activity of the pore-forming alpha subunits. [provided by RefSeq, Apr 2015]

Usage Research use only Conjugate Unconjugated
