

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target KCMB3

BKBETA3, HBETA3, K(VCA)BETA-3, KCNMB2, **Synonyms**

KCNMBL, SLO-BETA-3, SLOBETA3

Human KCMB3-Strep full length protein-synthetic **Description**

nanodisc 6~8weeks

Delivery Uniprot ID Q9NPA1 **HEK293 Expression Host**

Protein Families Ion Channels: Other

Protein Pathways

Background

The human full length KCMB3-Strep protein has a **Molecular Weight**

MW of 31.6 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

MaxiK channels are large conductance, voltage and calcium-sensitive potassium channels which are fundamental to the control of smooth muscle are fundamental to the control of smooth muscle tone and neuronal excitability. MaxiK channels can be formed by 2 subunits: the pore-forming alpha subunit and the modulatory beta subunit. The protein encoded by this gene is an auxiliary beta subunit which may partially inactivate or slightly decrease the activation time of MaxiK alpha subunit currents. Alternative splicing results in multiple transcript variants. A related
