

PRODUCT INFORMATION

KLK3 **Target**

PSA;Seminin;Kallikrein-3;P-30 **Synonyms** antigen;Semenogelase;APS

Recombinant human KLK3 protein with C-terminal **Description**

6×His tag

Delivery In Stock **Uniprot ID** P07288 **Expression Host HFK293** C-6×His Tag Tag

Molecular

Purity

Background

KLK3(Ala18-Pro261) 6×His tag Characterization

The protein has a predicted molecular mass of

27.7 kDa after removal of the signal peptide. The apparent molecular mass of KLK3-His is **Molecular Weight**

approximately 25-35 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % – 8% trehalose is added as protectants before Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. The gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. It encodes a single-chain

glycoprotein, a protease which is synthesized in the epithelial cells of the prostate gland, and is present in seminal plasma. It is thought to function normally in the liquefaction of seminal coagulum, presumably by hydrolysis of the high molecular mass seminal vesicle protein. The

serum level of this protein, called PSA in the clinical setting, is useful in the diagnosis and monitoring of prostatic carcinoma. Alternate splicing of this gene generates several transcript variants encoding different isoforms. [provided by
