

PRODUCT INFORMATION

Target LEPR

Synonyms OBR;OB-R;CD295;LEP-R;LEPRD

DescriptionRecombinant human LEPR Protein with C-terminal

6×His tag

DeliveryIn StockUniprot IDP48357Expression HostHEK293

Molecular

Reconstitution

Background

Tag

Characterization LEPR(Phe22-Asp839) 6×His tag

C-6×His Tag

The protein has a predicted molecular mass of

Molecular Weight

94.3 kDa after removal of the signal peptide. The apparent molecular mass of LEPR-His is

approximately 130-250 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 %
- 8% trehalose is added as protectants before

 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene belongs to the gp130 family of cytokine receptors that are known to stimulate gene transcription via

activation of cytosolic STAT proteins. This protein is a receptor for leptin (an adipocyte-specific hormone that regulates body weight), and is involved in the regulation of fat metabolism, as well as in a novel hematopoietic pathway that is required for normal lymphopoiesis. Mutations in this gene have been associated with obesity and

this gene have been associated with obesity and pituitary dysfunction. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. It is noteworthy that this gene and LEPROT gene (GeneID:54741) share the same promoter and the

(GeneID:54741) share the same promoter and the first 2 exons, however, encode distinct proteins (PMID:9207021).[provided by RefSeq, Nov 2010]
