

PRODUCT INFORMATION

Target	MFSD13A
Synonyms	bA18I14.8; C10orf77; TMEM180
Description	Human MFSD13A full length protein-MNP
Delivery	In Stock
Uniprot ID	Q14CX5
Expression Host	HEK293
Protein Families	Transmembrane
Protein Pathways	N/A
Molecular Weight	The human full length MFSD13A protein has a MW of 57.4 kDa
Formulation & Reconstitution	Lyophilized from PBS. Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions.
Storage & Shipping	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
Background	MFSD13A, also called Transmembrane protein 180 (TMEM180), is a transmembrane protein that belongs to the glycoside-pentoside-hexuronide (GPH):cation symporter family. Members of this family catalyze symport of a sugar molecule with a monovalent cation (H ⁺ or Na ⁺). MFSD13A is classified as a member of the cation symporter family and a multi-pass membrane protein, but little information is available regarding its substrate and topology.
Usage	Research use only
Conjugate	Unconjugated

ELISA assay to evaluate MFSD13A-MNP 0.5 μ g Human MFSD13A-MNP per well

Figure 1. Elisa plates were pre-coated with 0.5 μ g/per well purified human MFSD13A full length membrane nanoparticles. Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with MFSD13A full length membrane nanoparticles is 6.320ng/ml.
