

## **PRODUCT INFORMATION**

| Тад                             | C-Flag Tag  |
|---------------------------------|---|
| Target                          | MTR1B   |
| Synonyms                        | FGQTL2, MEL-1B-R, MT2   |
| Description                     | Human MTR1B full length protein-synthetic nanodisc  |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | P49286  |
| <b>Expression Host</b>          | HEK293  |
| <b>Protein Families</b>         | Transmembrane,Druggable Genome,   |
| Protein Pathways                | GPCRDB Class A Rhodopsin-like,Small ligand<br>GPCRs,Cancer,   |
| Molecular Weight                | The human full length MTR1B protein has a MW of 40.2kDa   |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | This gene encodes one of two high affinity forms<br>of a receptor for melatonin, the primary hormone<br>secreted by the pineal gland. This gene product is<br>an integral membrane protein that is a G-protein<br>coupled, 7-transmembrane receptor. It is found<br>primarily in the retina and brain although this<br>detection requires RT-PCR. It is thought to<br>participate in light-dependent functions in the<br>retina and may be involved in the neurobiological<br>effects of melatonin. [provided by RefSeq, Jul<br>2008] |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
