

PRODUCT INFORMATION

C-Flag Tag Tag **Target** OR10H2

Olfactory receptor 10H2; Olfactory receptor **Synonyms**

OR19-23

Human OR10H2 full length protein-synthetic Description

nanodisc **Delivery** 6~8weeks **Uniprot ID** 060403 HFK293 **Expression Host**

Protein Families Transmembrane, Druggable Genome,

GPCRDB Class A Rhodopsin-like, **Protein Pathways**

The human full length OR10H2 protein has a MW **Molecular Weight**

of 34.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and

hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor
