

## **PRODUCT INFORMATION**

C-Flag Tag Tag

**Target** PKD2

**Synonyms** APKD2, PC2, PKD4, Pc-2, TRPP2

Human PKD2 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q13563 **Expression Host HEK293** 

**Protein Families** Ion Channels: Transient receptor potential

**Protein Pathways** N/A

**Background** 

The human full length PKD2 protein has a MW of **Molecular Weight** 

109.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the polycystin protein family. The encoded protein is a multipass membrane protein that functions as a calcium permeable cation channel, and is involved in calcium transport and calcium signaling in renal epithelial cells. This protein interacts with polycystin 1, and they may be

partners in a common signaling cascade involved in tubular morphogenesis. Mutations in this gene

are associated with autosomal dominant polycystic kidney disease type 2. [provided by

RefSeq, Mar 2011]

**Usage** Research use only

Conjugate Unconjugated
