

## **PRODUCT INFORMATION**

| _                               |   |
|---------------------------------|---|
| Тад                             | C-Flag&Strep Tag  |
| Target                          | SCN8A   |
| Synonyms                        | BFIS5, CERIII, CIAT, DEE13, EIEE13, MED,<br>MYOCL2, NaCh6, Nav1.6, PN4  |
| Description                     | Human SCN8A-Strep full length protein-synthetic nanodisc  |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | Q9UQD0  |
| Expression Host                 | HEK293  |
| <b>Protein Families</b>         | Ion Channels: Sodium  |
| Protein Pathways                | N/A   |
| Molecular Weight                | The human full length SCN8A-Strep protein has a MW of 225.3 kDa   |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | This gene encodes a member of the sodium<br>channel alpha subunit gene family. The encoded<br>protein forms the ion pore region of the voltage-<br>gated sodium channel. This protein is essential<br>for the rapid membrane depolarization that<br>occurs during the formation of the action<br>potential in excitable neurons. Mutations in this<br>gene are associated with cognitive disability,<br>pancerebellar atrophy and ataxia. Alternate<br>splicing results in multiple transcript<br>variants.[provided by RefSeq, May 2010] |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
