**Delivery** 

**Background** 

## **PRODUCT INFORMATION**

**Target** SSR1

**Synonyms** SRIF-2, SS-1-R, SS1-R, SS1R

Human SSR1 full length protein-synthetic Description

nanodisc 6~8weeks

**Uniprot ID** P30872 **Expression Host HEK293** 

**Protein Families** GPCR, Transmembrane, Druggable Genome, GPCRDB Class A Rhodopsin-like, Peptide

**Protein Pathways** GPCRs, Cancer,

The human full length SSR1 protein has a MW of **Molecular Weight** 

42.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Somatostatins are peptide hormones that regulate diverse cellular functions such as neurotransmission, cell proliferation, and endocrine signaling as well as inhibiting the release of many hormones and other secretory proteins. Somatostatin has two active forms of 14 and 28 amino acids. The biological effects of somatostatins are mediated by a family of Gprotein coupled somatostatin receptors that are expressed in a tissue-specific manner. The protein encoded by this gene is a member of the

superfamily of somatostatin receptors having seven transmembrane segments. Somatostatin receptors form homodimers and heterodimers with other members of the superfamily as well as with other G-protein coupled receptors and receptor tyrosine kinases. This somatostatin receptor has greater affinity for somatostatin-14
