

PRODUCT INFORMATION

Tag C	-Flag&Strep Tag
Target St	SR1
Synonyms Si	RIF-2, SS-1-R, SS1-R, SS1R
	luman SSR1-Strep full length protein-synthetic anodisc
Delivery 6	~8weeks
Uniprot ID P3	30872
Expression Host H	IEK293
Protein Families G	PCR,Transmembrane,Druggable Genome,
	GPCRDB Class A Rhodopsin-like, Peptide
Molecular Weight M	he human full length SSR1-Strep protein has a IW of 42.7 kDa
Formulation & m Reconstitution ly	yophilized from nanodisc solubilization buffer (20 nM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% 8% trehalose is added as protectants before yophilization. Please see Certificate of Analysis or
ly Storage & Shipping at Ly	tore at -20°C to -80°C for 12 months in yophilized form. After reconstitution, if not ntended for use within a month, aliquot and store t -80°C (Avoid repeated freezing and thawing). yophilized proteins are shipped at ambient emperature.
Background Background Background Background Background Filter Background Filter	omatostatins are peptide hormones that egulate diverse cellular functions such as eurotransmission, cell proliferation, and ndocrine signaling as well as inhibiting the elease of many hormones and other secretory roteins. Somatostatin has two active forms of 14 nd 28 amino acids. The biological effects of omatostatins are mediated by a family of G- rotein coupled somatostatin receptors that are xpressed in a tissue-specific manner. The rotein encoded by this gene is a member of the uperfamily of somatostatin receptors having even transmembrane segments. Somatostatin eceptors form homodimers and heterodimers <i>i</i> th other members of the superfamily as well as <i>i</i> th other G-protein coupled receptors and eceptor tyrosine kinases. This somatostatin eceptor has greater affinity for somatostatin-14 han -28. [provided by RefSeq, Jul 2012]
	Research use only
Conjugate U	Inconjugated
