

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

TLR2 **Target** 

**Synonyms** CD282; TIL4

Human TLR2-Strep full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** 060603 **Expression Host HEK293** 

**Protein Families** Druggable Genome, Transmembrane **Protein Pathways** Toll-like receptor signaling pathway

The human full length TLR2-Strep protein has a **Molecular Weight** 

MW of 89.8 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping Lyophilized proteins are shipped at ambient

temperature.

The protein is a member of the Toll-like receptor (TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. This protein is a cellsurface protein that can form heterodimers with

other TLR family members to recognize conserved molecules derived from

**Background** microorganisms known as pathogen-associated molecular patterns (PAMPs). Activation of TLRs by

PAMPs leads to an up-regulation of signaling pathways to modulate the host's inflammatory response. This gene is also thought to promote apoptosis in response to bacterial lipoproteins.

This gene has been implicated in the

pathogenesis of several autoimmune diseases. Alternative splicing results in multiple transcript
