Lyophilized proteins are shipped at ambient

temperature.

The protein is a member of the Toll-like receptor (TLR) family, which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. They recognize pathogenassociated molecular patterns (PAMPs) that are expressed on infectious agents, and mediate the

production of cytokines necessary for the development of effective immunity. Studies in mice and human indicate that this receptor mediates cellular response to unmethylated CpG dinucleotides in bacterial DNA to mount an innate immune response.

Usage Research use only Conjugate Unconjugated

## ELISA assay to evaluate TLR9-Nanodisc 0.2µg Human TLR9-Nanodisc per well

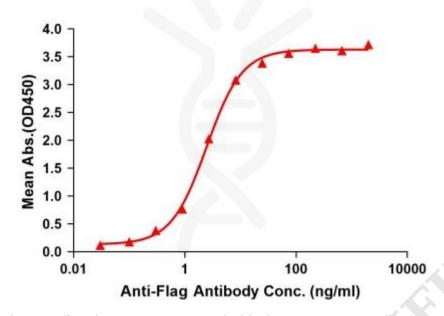

Figure 1. Elisa plates were pre-coated with Flag Tag TLR9-Nanodisc ( $0.2\mu g/per$  well). Serial diluted anti-Flag monoclonal antibody solutions were added, washed, and incubated with secondary antibody before Elisa reading. From above data, the EC50 for anti-Flag monoclonal antibody binding with TLR9-Nanodisc is 2.467 ng/ml.
