

## **PRODUCT INFORMATION**

| Тад                             | C-Flag Tag   |
|---------------------------------|--|
| Target                          | ТКРМЗ  |
| Synonyms                        | GON-2, LTRPC3, MLSN2   |
| Description                     | Human TRPM3 full length protein-synthetic<br>nanodisc  |
| Delivery                        | 6~8weeks   |
| Uniprot ID                      | Q9HCF6   |
| <b>Expression Host</b>          | HEK293   |
| <b>Protein Families</b>         | Ion Channels: Transient receptor potential   |
| Protein Pathways                | N/A  |
| Molecular Weight                | The human full length TRPM3 protein has a MW of 197.6kDa   |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for  |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.   |
| Background                      | The product of this gene belongs to the family of<br>transient receptor potential (TRP) channels. TRP<br>channels are cation-selective channels important<br>for cellular calcium signaling and homeostasis.<br>The protein encoded by this gene mediates<br>calcium entry, and this entry is potentiated by<br>calcium store depletion. Alternatively spliced<br>transcript variants encoding different isoforms<br>have been identified. [provided by RefSeq, Jul<br>2008] |
| Usage                           | Research use only  |
| Conjugate                       | Unconjugated   |
|                                 |  |
