TargetTRPM8SynonymsLTRPC6, LTrpC-6, TRPP8, trp-p8DescriptionHuman TRPM8 full length protein-synthetic nanodiscDelivery6-8wecksUnipot ID0722W7Expression HostHEK293Protein FamiliesIon Channels: Transient receptor potentialProtein FamiliesIon Channels: Transient receptor potentialProtein FamiliesN/AMolecular WeightThe human full length TRPM8 protein has a MW of 127.7kDaFormulation £ ReconstitutionThe human full length TRPM8 protein has a full of usphilzed from nanodisc solubilization buffer (20 mM Tris-HCI, 150 mM NaCl, pH 8.0.) Normally 5% - 8% trehalose is added as protectants before for Storage & ShippingStorage & ShippingReceptor-activated non-selective cation channel intended for use within a moth, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized form and sensation. Permeable for monvalent cation solution of intracellular phil. NotWeed in methol sensation. Permeable for monvalent cation solution or lange-dependent darius. Activated upon depolarization, changes in temperature resulting in graded shifts of its voltage-dependent activation curves. The chemical agonist menthol ecologian, and cesium and divalent cation calcium. Temperature estivation and periodies are associated with woltage-dependent darius solution, reportation and divalent in portate cancer calcium. Temperature estivation solution and depolarization, changes in temperature resulting in graded shifts of its voltage-dependent activated upon depolarization, changes in temperature resulting in graded shifts of its voltage-dependent activated upon depolarization, changes are elivation pr	Тад	C-Flag Tag
