

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

TRPV4 **Target**

BCYM3, CMT2C, HMSN2C, OTRPC4, SMAL, SPSMA, SSQTL1, TRP12, VRL2, VROAC **Synonyms**

Human TRPV4-Strep full length protein-synthetic **Description**

nanodisc

Delivery 6~8weeks **Uniprot ID** Q9HBA0 **HEK293 Expression Host**

Protein Families Ion Channels: Transient receptor potential

Protein Pathways

Background

The human full length TRPV4-Strep protein has a **Molecular Weight**

MW of 98.3 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the OSM9-like transient receptor potential channel (OTRPC) subfamily in the transient receptor potential (TRP) superfamily of ion channels. The encoded protein is a Ca2 -permeable, nonselective cation channel that is thought to be involved in the regulation of

systemic osmotic pressure. Mutations in this gene are the cause of spondylometaphyseal and metatropic dysplasia and hereditary motor and sensory neuropathy type IIC. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Apr
