

PRODUCT INFORMATION

Clone ID DM202
Target CD56

Synonyms NCAM1; CD56; MSK39; NCAM

Host Species Rabbit

Description PE-conjugated Anti-CD56 antibody(DM202);

Rabbit mAb

Flow Cyt

Delivery 3-4 weeks
Uniprot ID P13591
IgG type Rabbit IgG
Clonality Monoclonal
Reactivity Human

Recommended

Applications

Dilutions Flow Cyt 1:100

PurificationPurified from cell culture supernatant by affinity

chromatography

Formulation & Reconstitution

Background

Liquid PBS with 0.05% Proclin300, 1% BSA

Storage & Shipping Store at 2°C-8°C for 6 months

This gene encodes a cell adhesion protein which is a member of the immunoglobulin superfamily. The encoded protein is involved in cell-to-cell interactions as well as cell-matrix interactions during development and differentiation. The encoded protein plays a role in the development

of the nervous system by regulating neurogenesis; neurite outgrowth; and cell migration. This protein is also involved in the expansion of T lymphocytes; B lymphocytes and natural killer (NK) cells which play an important role in immune surveillance. This protein plays a role in signal transduction by interacting with fibroblast growth factor receptors; N-cadherin and other components of the extracellular matrix and

other components of the extracellular matrix and by triggering signalling cascades involving FYN-focal adhesion kinase (FAK); mitogen-activated protein kinase (MAPK); and phosphatidylinositol 3-kinase (PI3K). One prominent isoform of this gene; cell surface molecule CD56; plays a role in several myeloproliferative disorders such as acute myeloid leukemia and differential expression of this gene is associated with differential disease progression. For example; increased expression of CD56 is correlated with

lower survival in acute myeloid leukemia patients whereas increased severity of COVID-19 is correlated with decreased abundance of CD56-expressing NK cells in peripheral blood.

Alternative splicing results in multiple transcript

Email: info@dimabio.com Website: www.dimabio.com

Alternative splicing results in multiple transcr variants encoding distinct protein isoforms.

Usage Research use only

Conjugate PE-conjugated
