This gene encodes a member of the

immunoglobulin receptor superfamily and the Fcreceptor like family. This gene and several other Fc receptor-like gene members are clustered on the long arm of chromosome 1. The encoded protein is a single-pass type I membrane protein

and contains 8 immunoglobulin-like C2-type domains. This gene is implicated in 8 cell development and lymphomagenesis. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by

RefSeq, Sep 2010]
